

Welcome to ioki  
inspiring smart mobility

15. June 2020

# Mobility today and in the future

"People desire to move freely,  
and it must be easy to do so"

A close-up photograph of a man with short brown hair and black-rimmed glasses, sitting in the driver's seat of a car. He is wearing a white t-shirt and looking out the window with a slight smile. The background shows green trees and a blue sky, with sunlight filtering through the leaves, creating a dappled light effect on his face and the car's interior. The text is overlaid on the left side of the image.

"Mobility customized just to my needs –whenever I need to go from A to B."

Private ride-hailing is crowding out public local, bicycle and foot pedestrian traffic.

Quelle: UNSUSTAINABLE? The Growth of App-Based Ride Services and Traffic, Travel and the Future of New York City; Schaller Consulting, Februar 2017

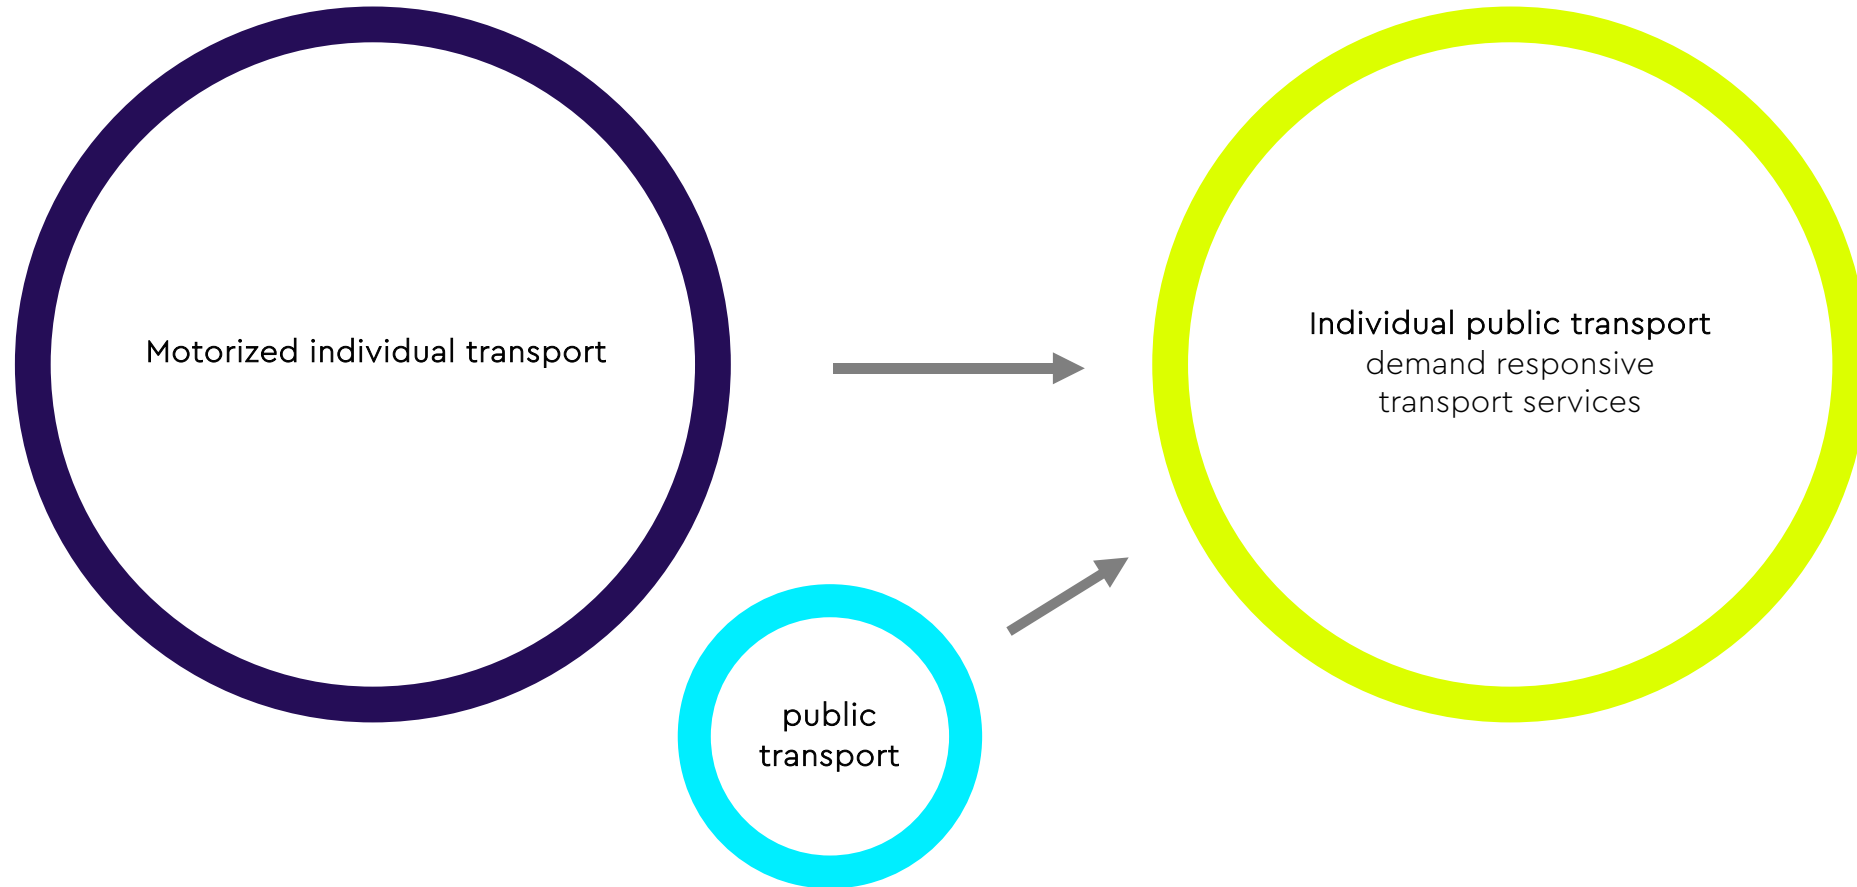

# Mobility of today: Challenges in urban and rural areas

The Status Quo of public transport  
In cities traffic jams, massive environmental pollution and parking spaces also pose a problem. At the same time there is a lack of suitable mobility offers.

# Individual public transport: New services and advantages arise

# Mobility will drastically change until 2025

## Shared rides

Shared rides will become an essential part of mobility in rural and urban areas.

## Low-priced mobility

By establishing new mobility services prices will decrease.

## Digital travel

Full transparency concerning mobility services.

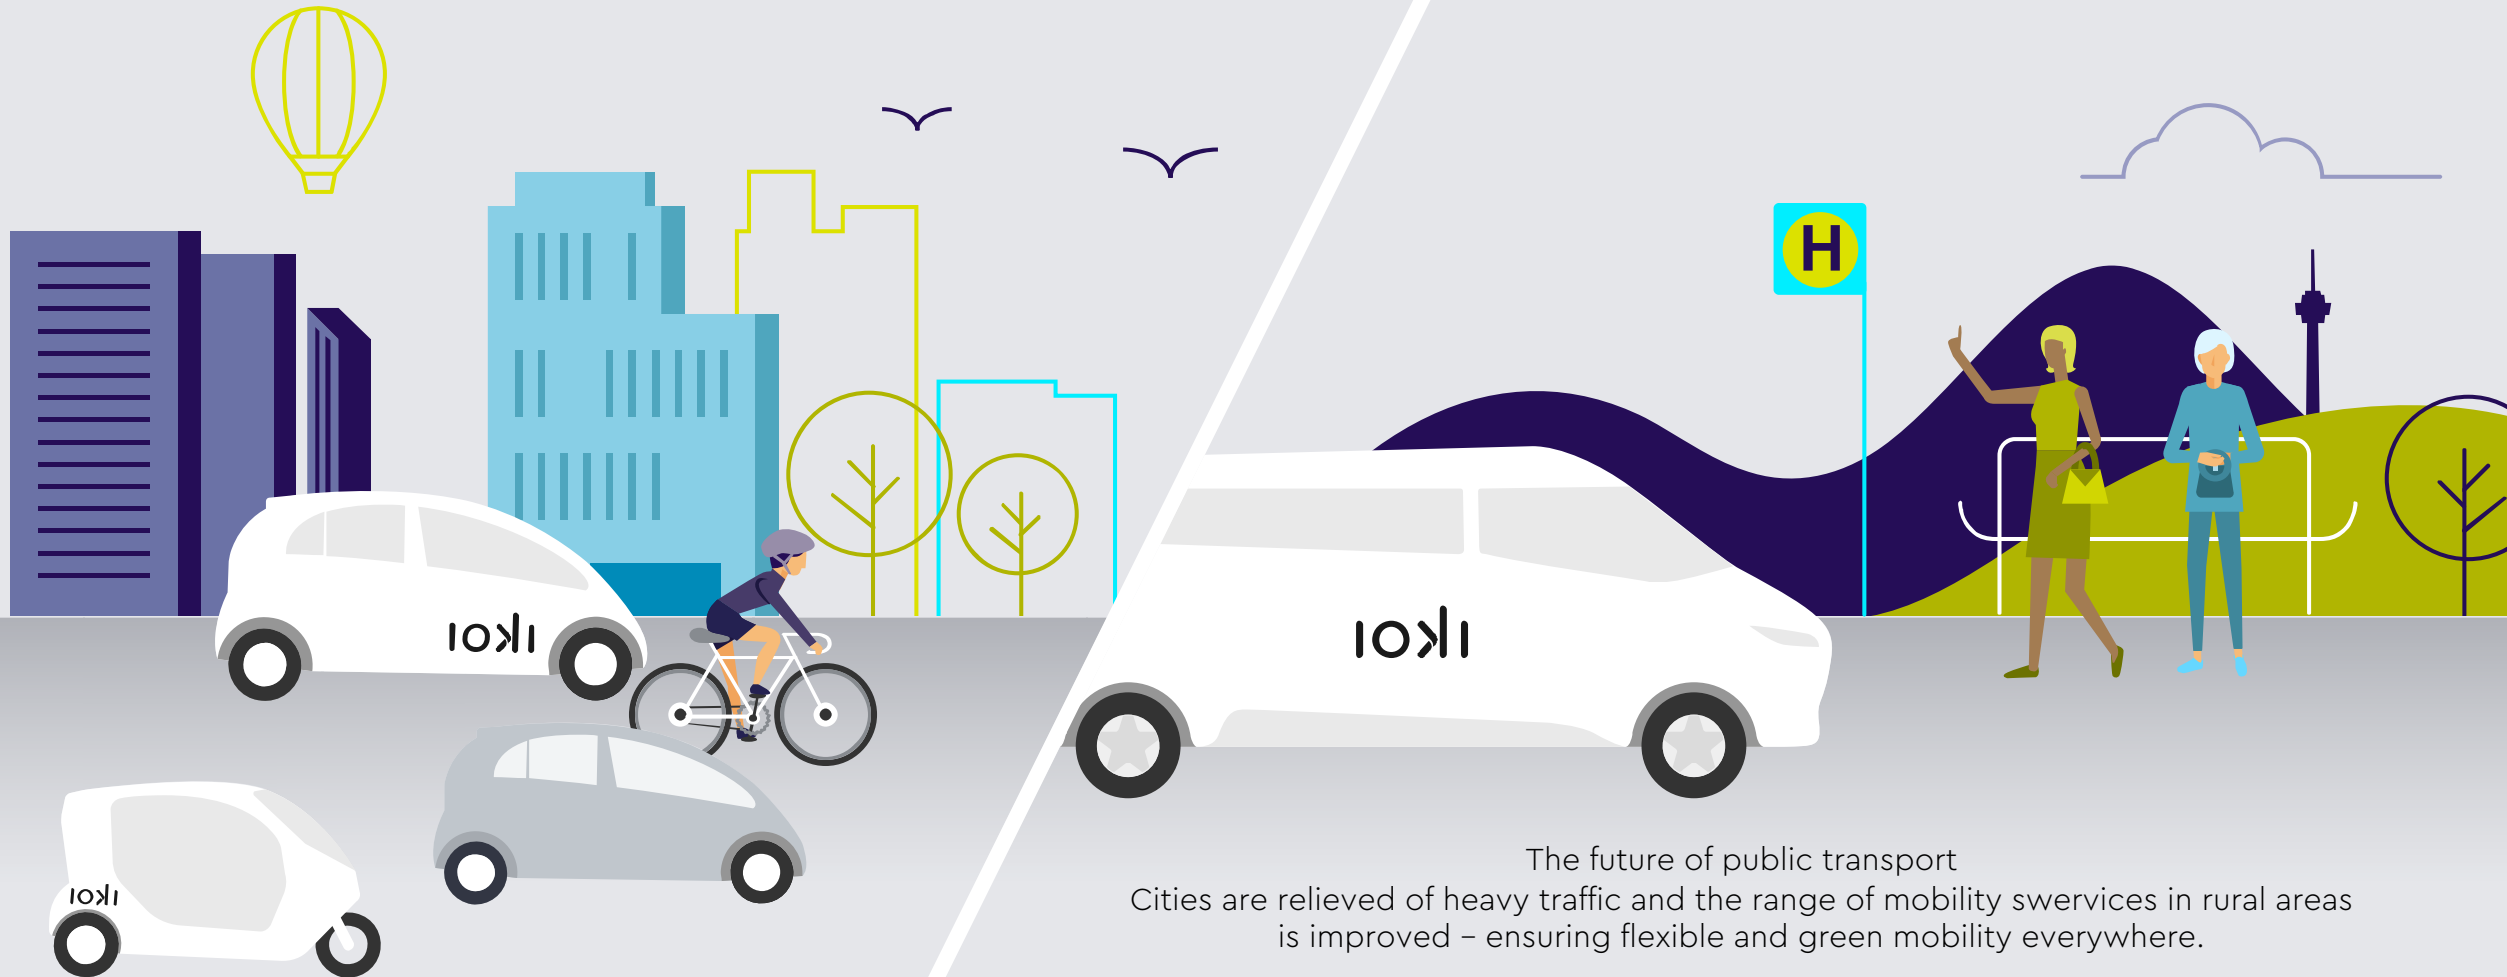

## Autonomous vehicles

The first autonomous vehicles will be in regular service every day.

# Mobility of Tomorrow: Urban and Rural Solutions

The future of public transport  
Cities are relieved of heavy traffic and the range of mobility services in rural areas is improved – ensuring flexible and green mobility everywhere.

# Approaches to Deep Public Transport Integration of On-Demand Shuttles

City feeder

Demand-responsive transportation services to connect areas between the existing public transport network

Bus feeder

Building connections with demand-responsive services for longer walking distances (e.g. from door-to-station).

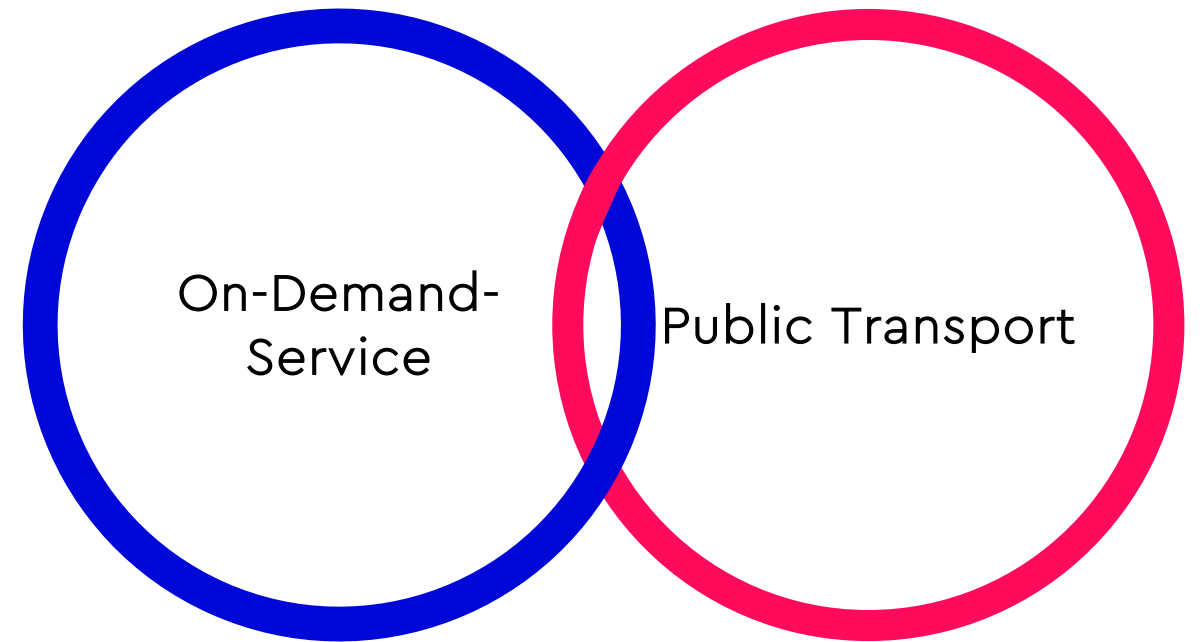

Rural feeder

Replacing line ends of public transport with demand-responsive transport services.

Public bus
  An on-demand service bus to the next public transport station
  Walking distance to the next public transport station
  Shuttle-Integration into the public transport system

Our solution is to provide a meaningful supplementation and intelligently integrate it into existing public transport systems.

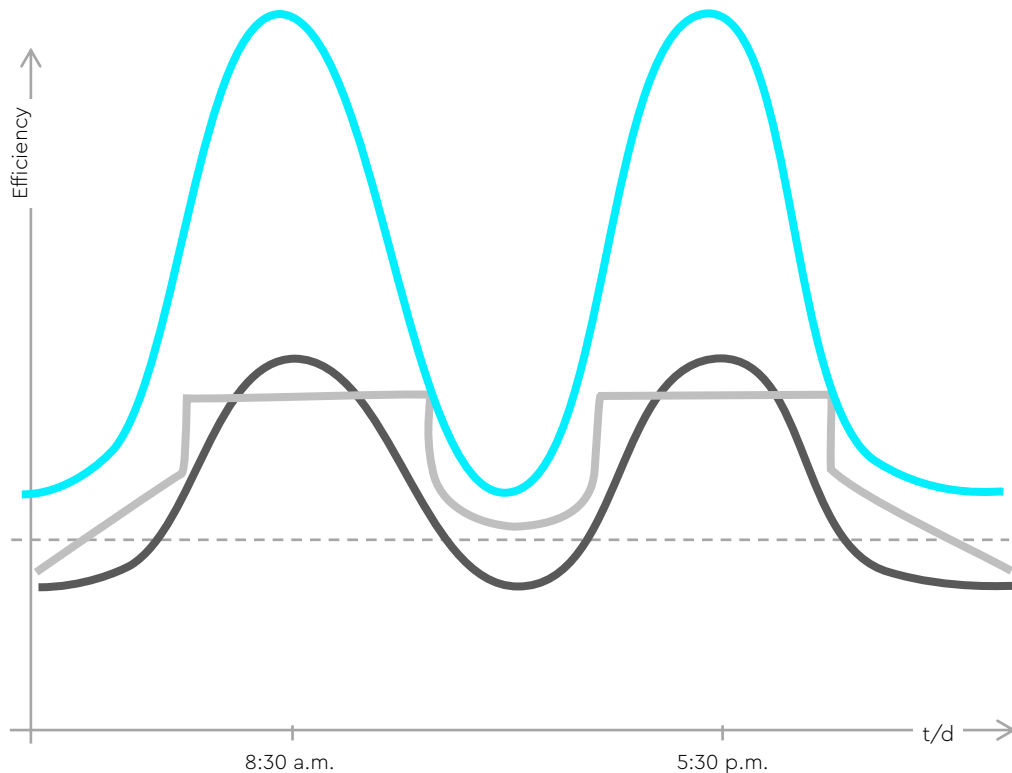

We create sustainable  
Public Transport services.

# Clever and Integrated Connections

# Integration and symbiosis of on-demand and line systems (public transport)

- Intelligent combination and integration of on-demand and line can greatly increase overall efficiency
- Permanent optimization possible through accurate prediction
- Good Practice: ioki Hamburg

— Regular  
— Integrated on-demand system  
— Overall system efficiency

We are ioki

Important for the success of  
On-demand mobility:  
Expertise in traffic planning.

# Deutsche Bahn is part of our DNA

Our holistic mobility concept gets people moving wherever they are

Mobility Analytics  
& Consulting

# Mobility Analytics & Consulting

# Why Mobility Analytics?

1.  
**Mobility behavior**

Detailed knowledge of the mobility behavior of the population

2.  
**Reachability**

Detection of areas with accessibility deficits in different time windows

3.  
**Areas predestined for new mobility offers**

Knowledge of ideal areas for efficient public transport-integrated operations of new forms of mobility

4.  
**Product design**

Individually to the region tailored product design

5.  
**Economics**

Overview of costs for various differing scenarios for public transport operations

6.  
**Public transportation systems**

Transparency regarding operation and demand in existing public transport systems

# Good planning is half the battle

ioki Mobility Analytics & Consulting portfolio at a glance

# Our portfolio for your needs

## Analysis of public transport systems

- Initial data-based analysis of your region
- Simulation of mobility demand
- Accessibility analysis of public transport
- Analysis of your traffic data
- Visualization of your traffic data

## Planning of new mobility offers

- Identification of sensible operating areas
- Simulation of operational on-demand service
- Derive economics of on-demand traffic
- Planning of virtual stops
- Planning of micromobility offers

## Intelligent solutions for public transport systems

- System comparison between area- and line-based services
- Modal split evaluation of changed public transport offers
- Ecological evaluation of new public transport offers

## Planning of urban and regional infrastructure

- Location analysis
- Location optimization

## Our Approach:

Comprehensive consulting and planning services in the areas of public transport, new mobility offers and infrastructure

DRT-platform

# ioki On-demand platform

The **Passenger App** is very easy to use and tailored to customer needs.

It has got an easy booking and payment process, is integratable in existing public transport systems and customizable to one's personal needs

The **driver App** is responsive and driver-centric

It has got an integrated turn by turn navigation system, provides fast reactions to ride requests and automations of procedures

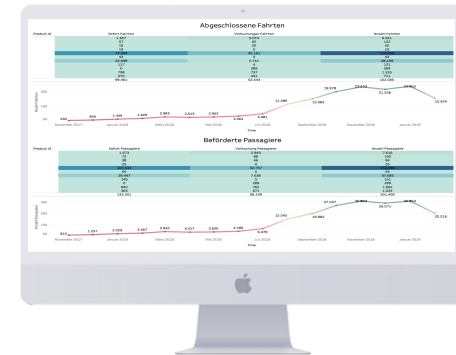

# ioki On-demand platform

The operator tool provides a clear and detailed operational planning, efficient control of the On-demand fleet and **Real-time monitoring**

The **Smart Backend** platform is easily adaptable to individual needs with intelligent pooling and routing. Our algorithm calculates the optimum vehicle utilisation

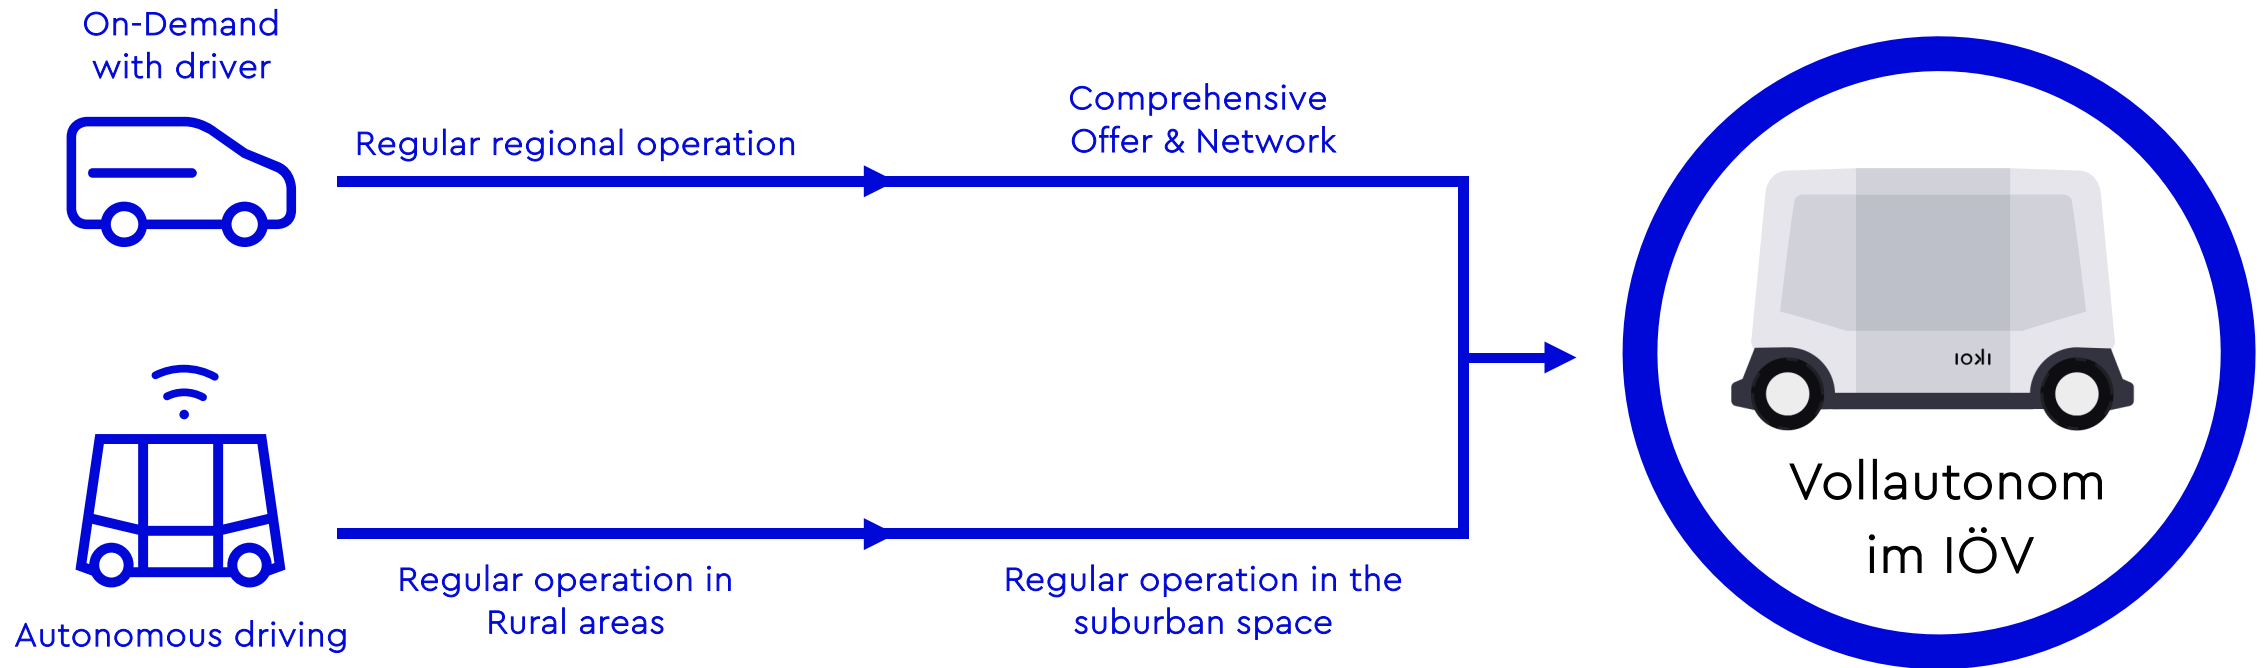

The **Business Intelligence** toolset offers divers reports ranging from KPI, via Revenue and Product to Operations reports

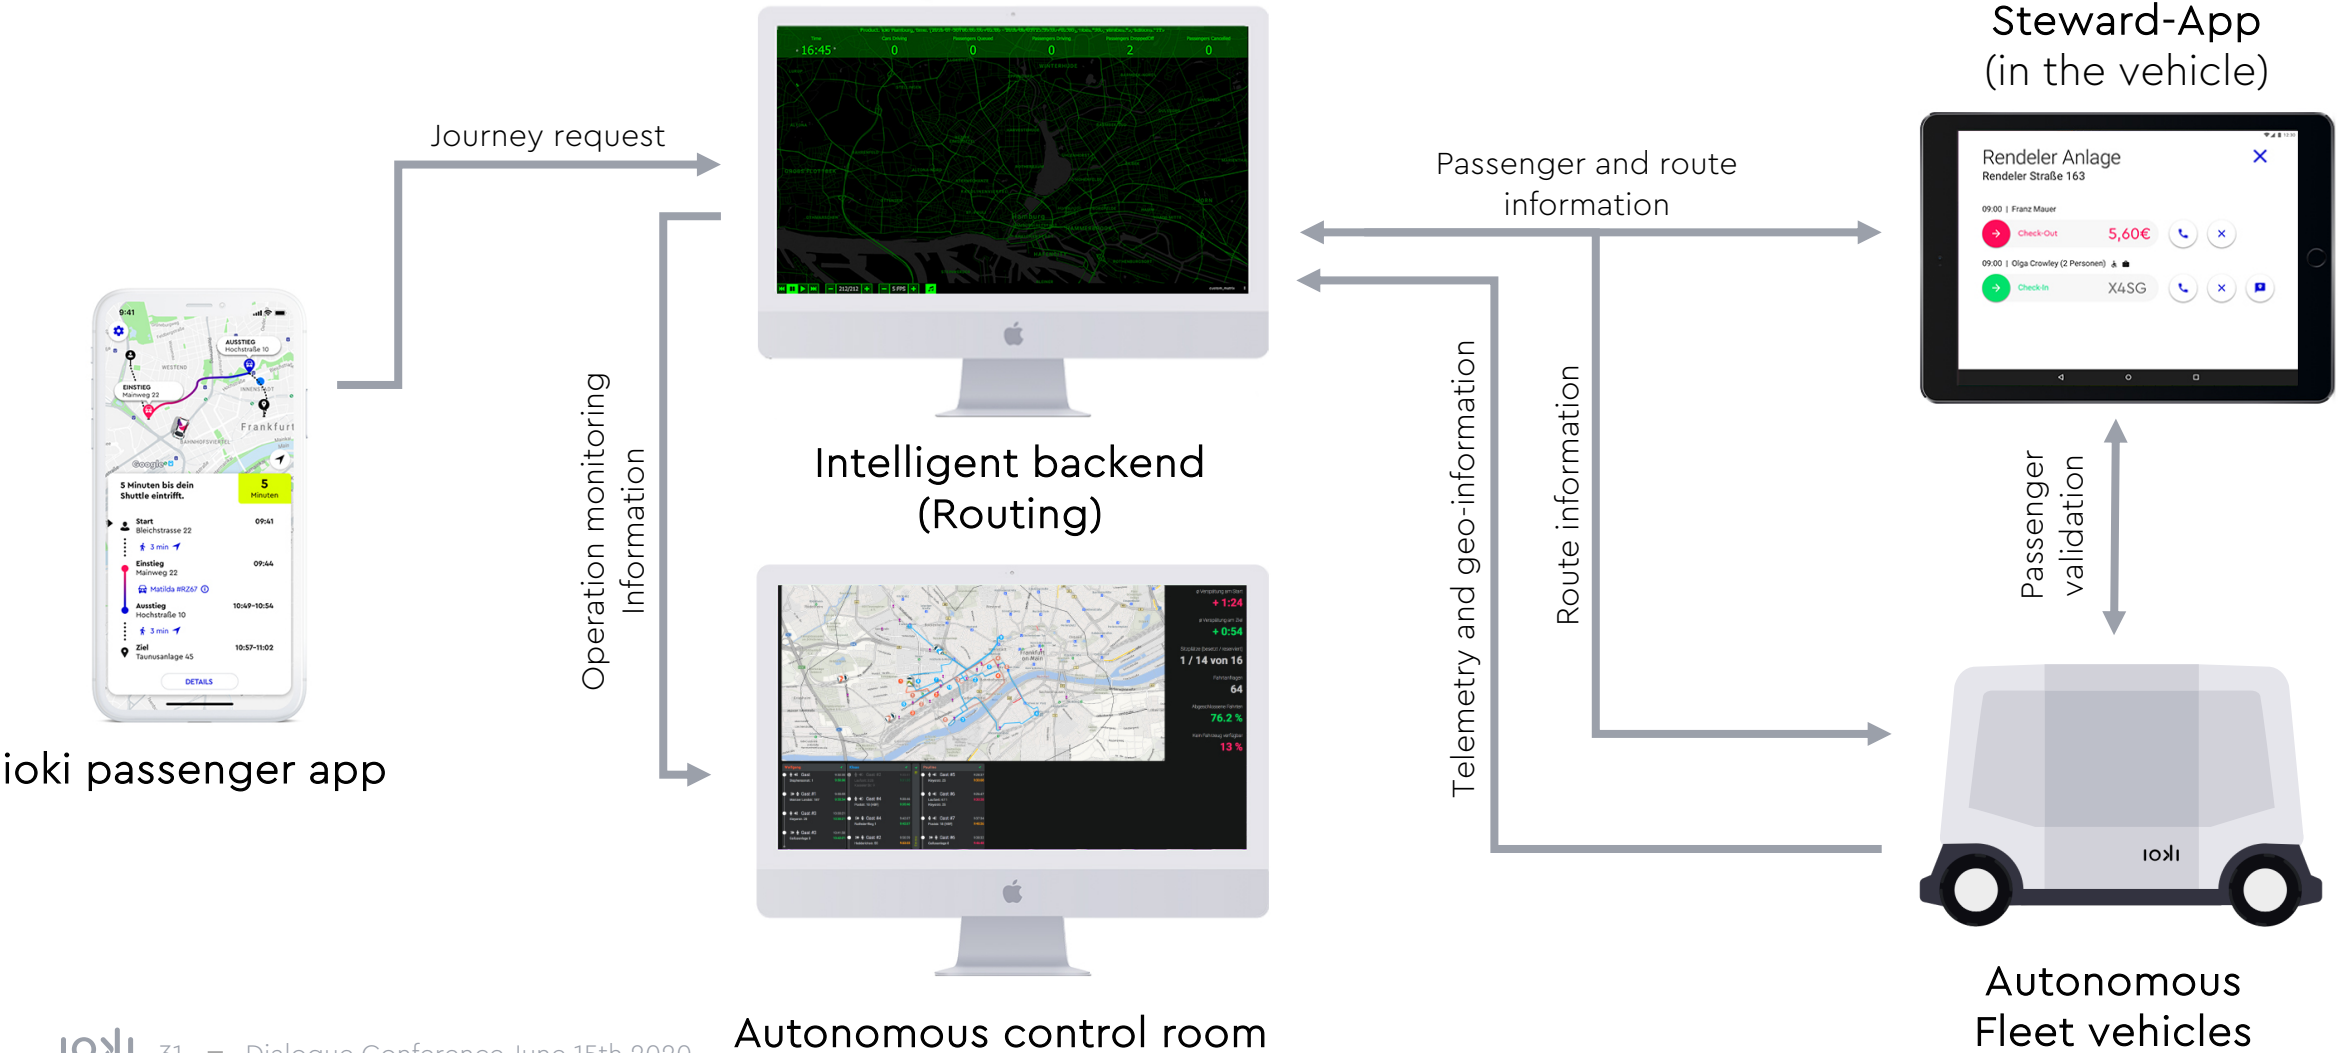

Autonomous driving

# First German Autonomous Shuttle

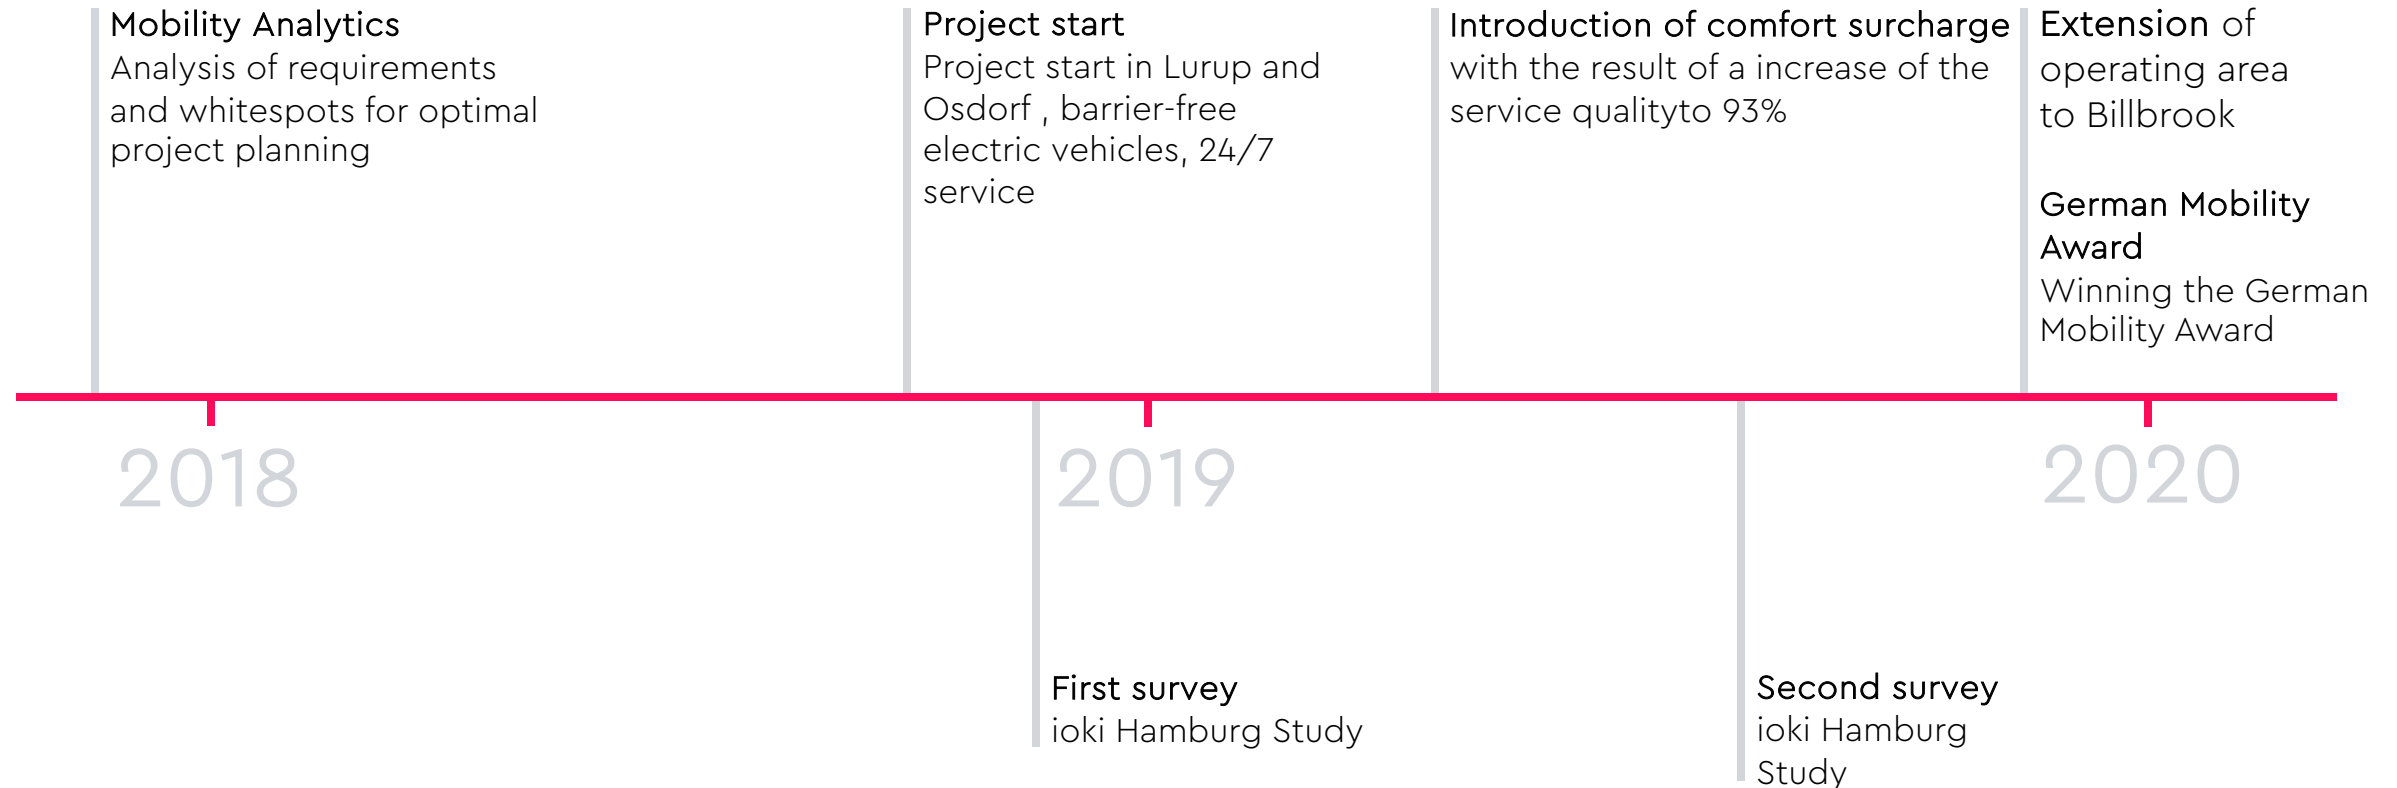

# ioki Autonomous Ready On-Demand Platform

# Case Study

# ioki Hamburg in Kooperation mit der VHH

# ioki Hamburg in cooperation with the VHH

- Electric fleet
- 24/7
- More than 320.000 passengers
- More than 60% of the inhabitants of the districts of the service area have **downloaded the ioki app**
- Simplifies access to public transport for people with reduced mobility

## Reliable and Safe

- 93% Quality of Service rate
- Independent Survey reveals Service regarded as
- **Reliable** inter alia by handicapped passengers
- **Safe** - especially by women
- **25%** of the users would have used a private vehicle

## Loyalty & Safety

- More than 87% recurring users
- less decrease of demand by corona than in bus operations

PT Feeder

- More than 50 % of all passengers use ioki Hamburg to reach a feeder public transport station
- The Service is fully integrated into the regional HVV pricing system
- Public Transport connection feature

# Summary

# ioki a Public Transport specialist

## Key functions of the ioki platform

- Scheduling tool for planning vehicle circuits and lines
- Real adhoc and pre-booking functionality
- Real-time data display of Public Transport services directly displayed within the customer App for each stop within the operating area
- Arrival based search
- Public Transport Ticket integration
- Mix of schedule and linebased operations and On-Demand operations in one area possible
- Timetable integration via convenient import function, e.g. for ALT traffic
- Highly flexible price adapter (prices can be adjusted automatically according to time of day)
- Anonymous contact between driver and customer before starting the journey
- Business Intelligence with drivers KPI, Product and Operations reports
- Barrier-free customer App (e.g. contrast, VoiceOver)
- Telephone booking

# Theses

No1 - Ridepooling should be an integral part of public transport

Interaction with public transport

Ridepooling fills gaps

No2 - Data-based analysis of the entire public transport network for optimal planning

Using existing data correctly

Analyzing potentials

No3 - Agile traffic planning under public responsibility

Fast cycles

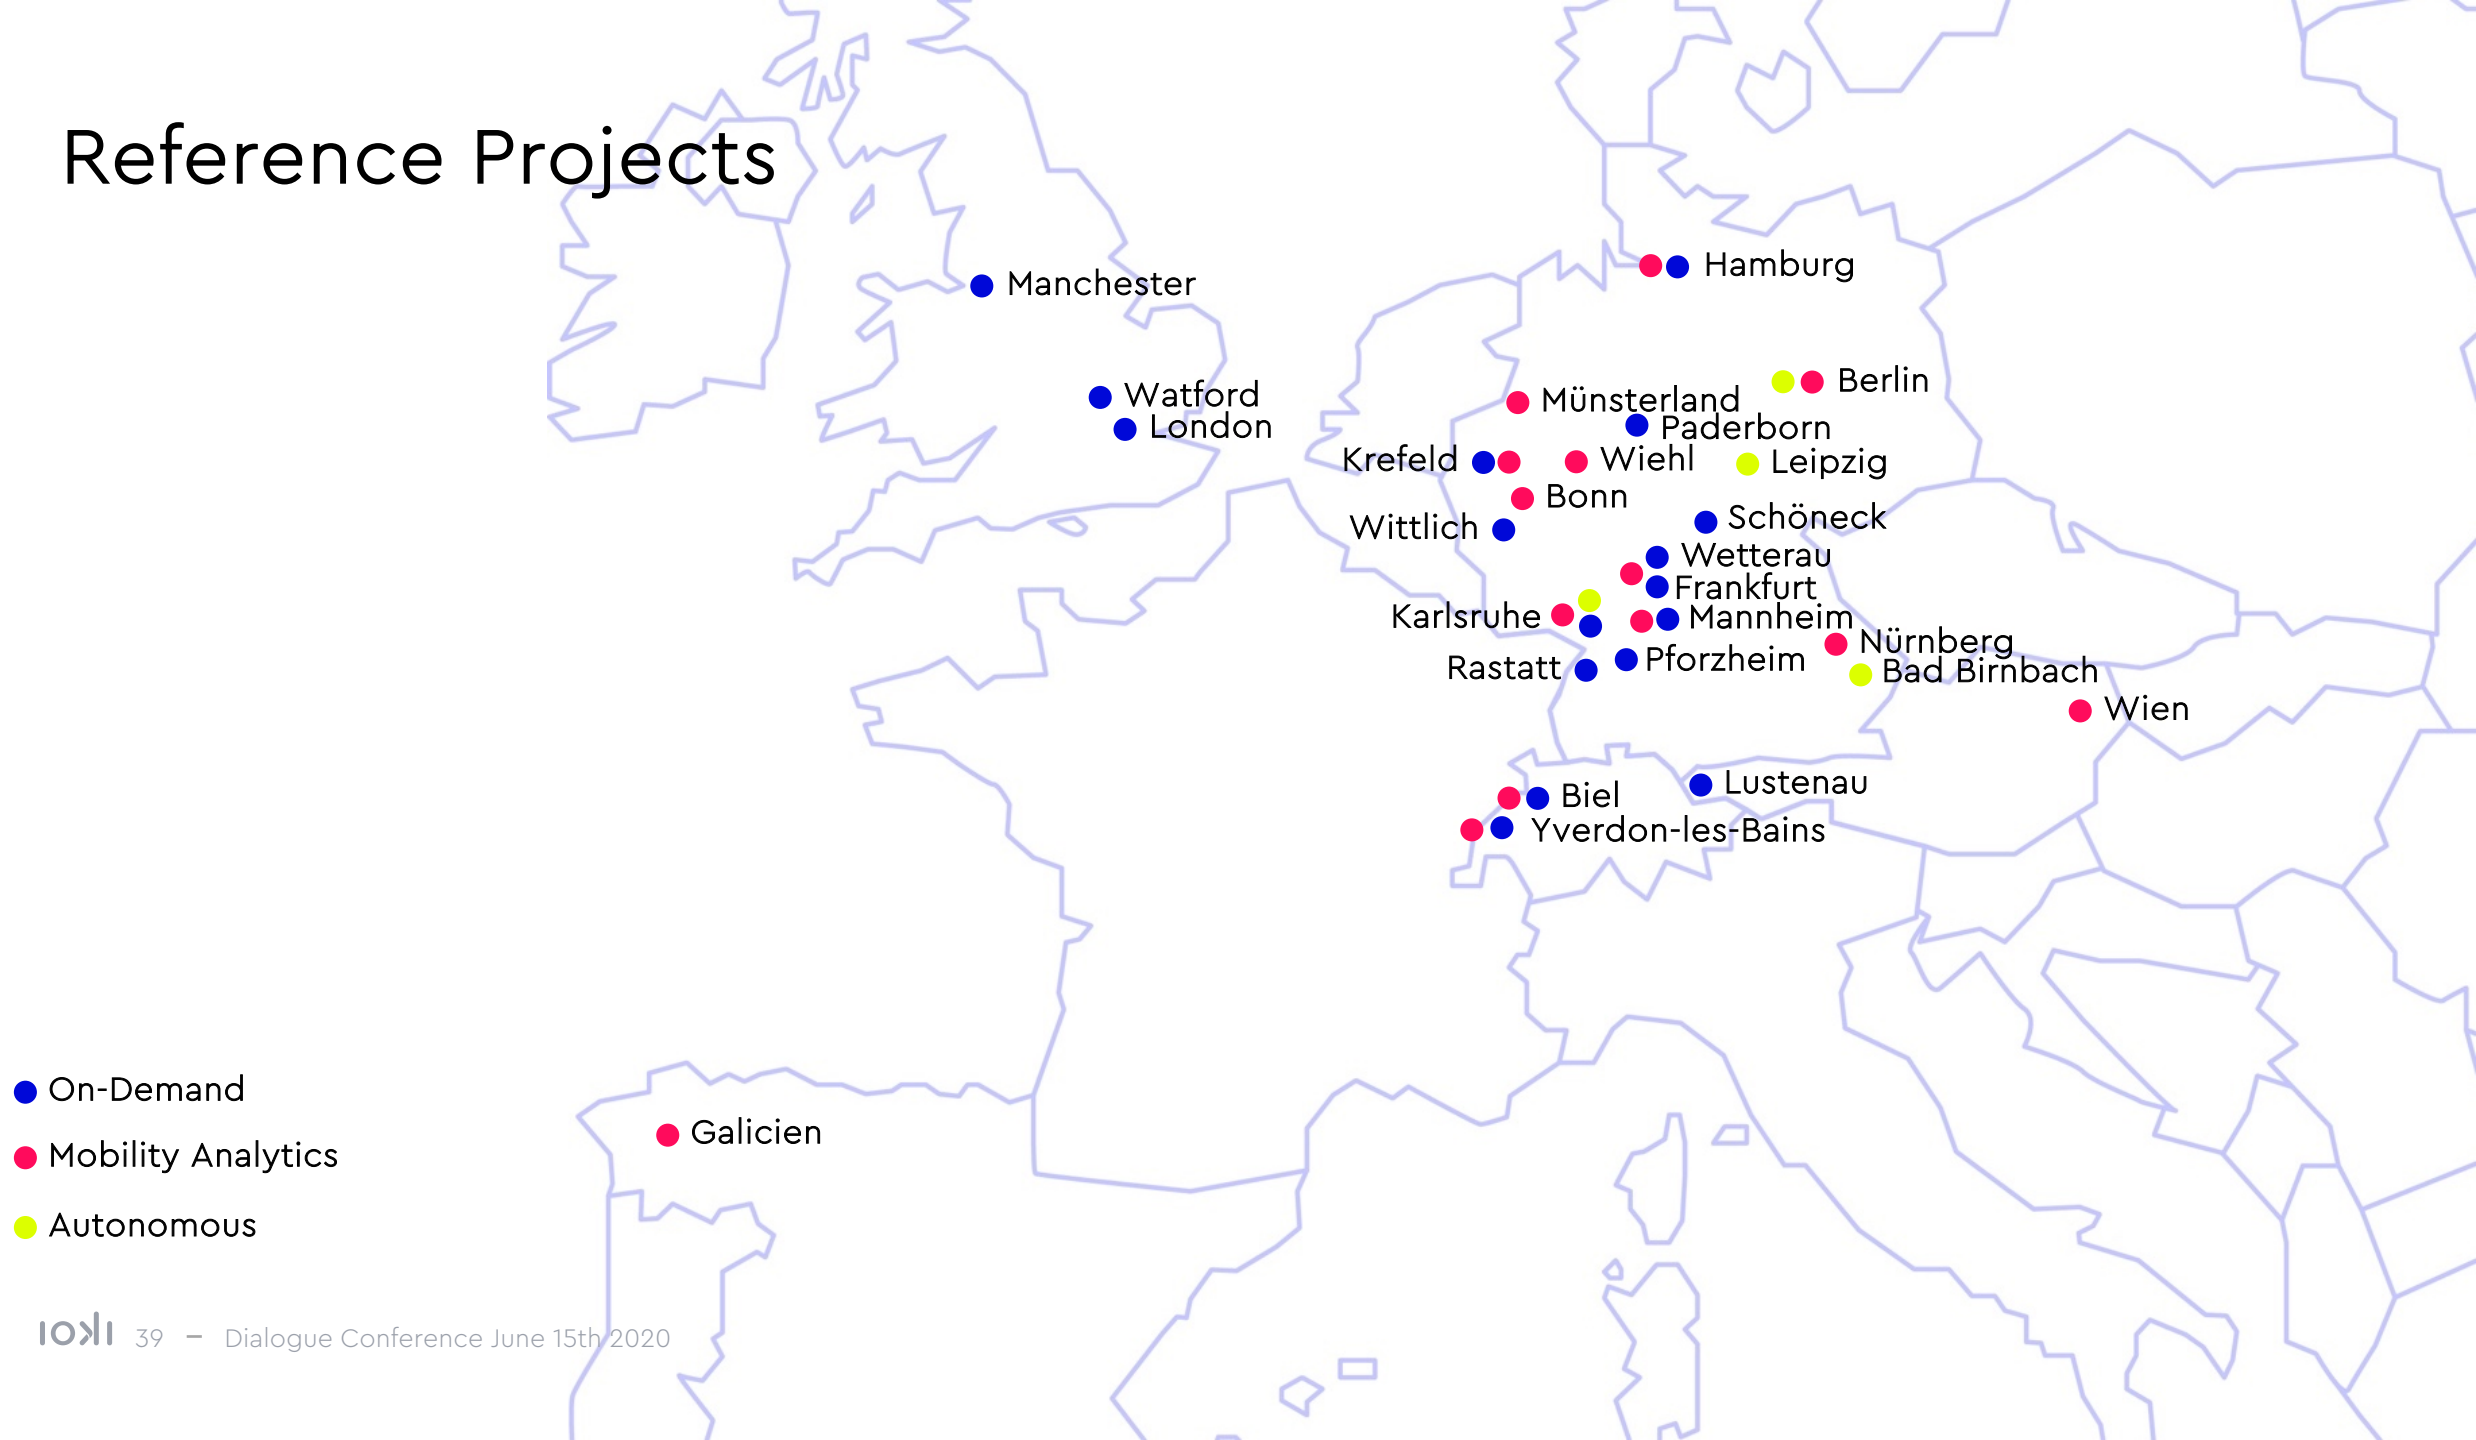

Digitisation

Mobility mix
