

How to measure on UNs Sustainable Development Goals?

Ruter supplier conference 13.11.2018

Frode Hvattum, Chief of Strategy

Ruter#

Our key questions

How can we measure our contribution to the UN Sustainable Development Goals?

...based on Ruter data and/or other data?

... and how can this accelerate the journey towards offering sustainable freedom of movement?

Ruter#

Our current goals

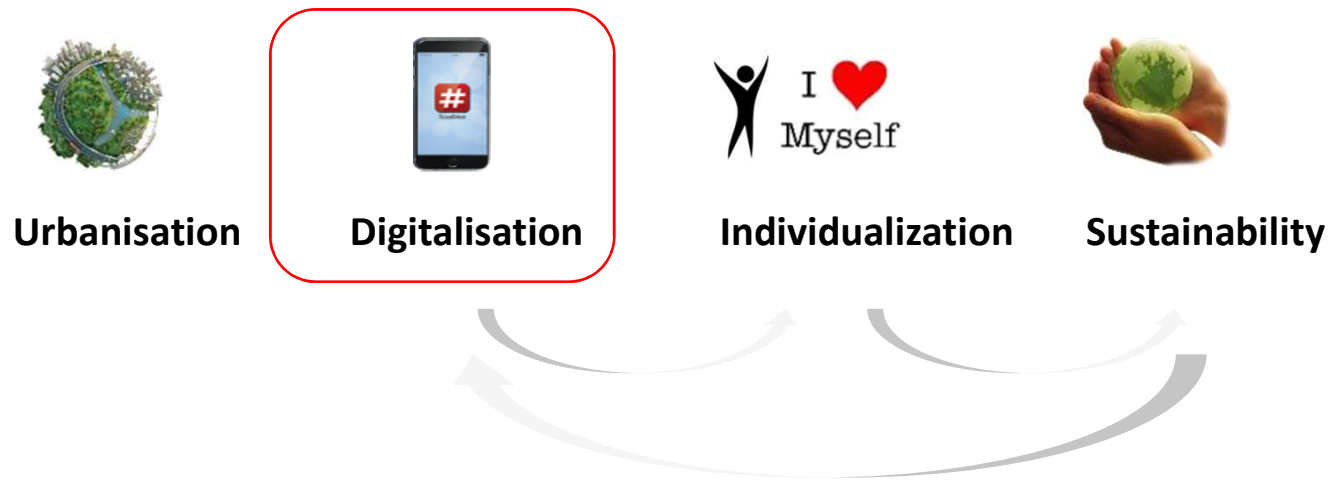

1 Public transport, cycling and walking is to meet the need for increased passenger transport

2 All public transport is to run on only renewable energy in 2020

Ruter#

Key drivers for mobility

Ruter have selected 8 of the
Sustainable Development Goals

3 GOOD HEALTH AND WELL-BEING

We will ensure good health and promote quality of life for everyone, working to..

.. facilitate for cycling and walking

.. reduce air pollution

.. reduce car traffic

.. increase traffic safety

**We promote inclusive
and sustainable
economic growth and
decent work for
everyone, and work to...**

- .. facilitate access to the labour market
- .. ensure decent working conditions throughout our value chain
- .. facilitate good mobility for tourists
- .. be an inclusive, responsible and fair organisation
- .. make the region attractive for business and people

**8 DECENT WORK AND
ECONOMIC GROWTH**

We enable infrastructure for mobility and contribute to innovation, and...

.. develop solutions that promote freedom of movement

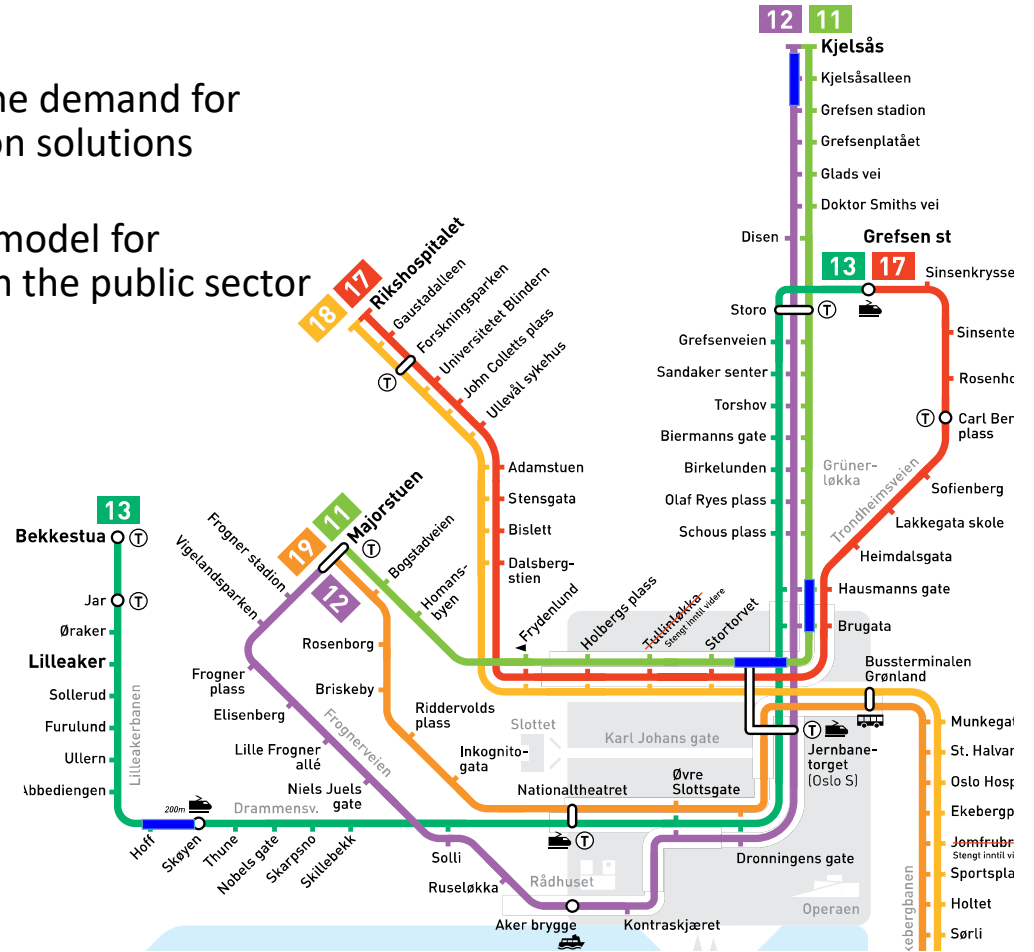

.. promote infrastructure for sustainable mobility

.. increase the demand for zero-emission solutions

.. are a role model for innovation in the public sector

Ruter#

We contribute to reducing inequality in the city and work to...

- .. connect the city with towns and rural areas
- .. provide green mobility to those with disabilities
- .. provide affordable mobility for everyone

We work to ensure attractive and sustainable public transportation, by..

.. integrating sustainable mobility

.. increasing the share of cycling, walking and sharing of vehicles

.. enabling space and access to green areas

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

We ensure sustainable stewardship of our inventory, and work to

.. optimise capacity utilisation of our vehicles

.. set ambitious requirements for circularity in procurement

.. reduce energy use in our operations

.. optimise our internal use of resources

.. build expertise and collaborate with value chain actors

We work towards a low-emission society to fight climate change, and will..

.. become fossil free by 2020 and fully emission free by 2028

.. be a driving force for climate action

.. minimise greenhouse gas emission throughout our value chain

.. plan resilient infrastructure that handles the consequences of climate change

.. be a driving force to reduce emissions from and through infrastructure development

Ruter#

17 PARTNERSHIPS FOR THE GOALS

We work in partnerships to ensure sustainable development, and..

- .. challenge our own employees and public actors to contribute to the SDGs
- .. use our leverage to promote sustainability measures
- .. share knowledge and experience from our transition to emission-free technology
- .. collaborate with corporations and networks to increase innovation and implementation

THE EFFECT

WHY

HOW

We have structured them into a context that is relevant for Ruter and public transportation

Its now being articulated in a strategy and integrated in Ruters vision, goals, working tools and capabilites of all employees

Strategy

The SDGs and our impact is now the basis for Ruters Sustainability strategy

Bærekraft i Ruter

Bærekraftig utvikling handler om å ta vare på behovene til mennesker som lever i dag, uten å sette fremtidige generasjoners muligheter til å dekke sine. Bærekraftmålene reflekterer de tre dimensjonene i bærekraftig utvikling: Klima og miljø, økonomi og sosiale forhold. Dette har vært utgangspunktet når vi i Ruter har utarbeidet vår bærekraftsstrategi.

Det er bred politisk enighet om at kollektivtransporten, sammen med sykkel og gange, skal ta vekslen i persontransporten i regionen. Dette reguleres av Byplankvoten 2017/2023 og skal være et virkemiddel for å nå klimamålet, nullvekstmålet. Klimagassutslipp fra kollektivtransporten utgjør som lag 4 prosent av utslippene fra transport i hovedstadsregionen. Ruter skal fortsette å redusere miljøpåvirkningen fra kollektivtransporten, men det klart viktigste miljøbidraget er å få flere bilister til å reise kollektivt. Det er ressurseffektivt. Kollektivtrafikk har stor påvirkning på mange andre områder:

- Et vellungerende samfunn med høy livskvalitet utgjør en attraktiv region. God mobilitet gir bevegelsesfrihet og er avgjørende for at samfunnet skal fungere bra og for at regionen skal oppleves som attraktiv.
- Gode mobilitetsløsninger bidrar til å redusere ulikhet slik at den enkelte har praktisk og økonomisk mulighet til å delta i arbeidslivet, utdanning og å utfolde seg på fritiden.
- Effektiv mobilitet handler om god forvaltning av areal som et knapphetsdekkende byens område. Det er en forutsetning for næringsutvikling og økonomisk velsstand.
- Gode mobilitetsløsninger er kritisk for å redusere miljøbelastning fra transportsektoren og bidra dermed til bedre helse i befolkningen.

EFFEKT

HVORFOR

HVORDAN

Ruter#

Slik jobber vi med bærekraft i Ruter – klikk på bildene for å lese mer

Slik jobber vi med bærekraft i Ruter – klikk på målene for å lese mer

I Ruter ønsker vi å bidra til bærekraftsmål 10, ved å:

- Bedre by- og tettstedsystemer og på tryk og buss
- Gjøre kollektivtrafikk tilgjengelig for reisende med funksjonsnedsettelser
- Utvikle en prestestruktur som tar hensyn til sosiale og økonomiske forskjeller

Input til strategidokument

- Word dokument som beskriver mer utfyllende hvordan vi har jobbet og hva vi har kommet fra til

Strategidokument

- Digital versjon, beskrivelse av de 8 utvalgte bærekraftmålene
- Leveres i pptx til styremøte i september, i digitalformal i etterkant

Ruter#

Vision and objectives

Our vision

Sustainable freedom of movement

Our main goals

Grow green and shared mobility

Contribute to sustainable cities and region

Earn trust

Our focus areas

Further develop our existing service

Transition to zero emission

Explore new mobility areas

Mobility as a service

Our values

Reliable

Open

Innovative

Ruter#

We want to use it to navigate and accelerate the developments in mobility

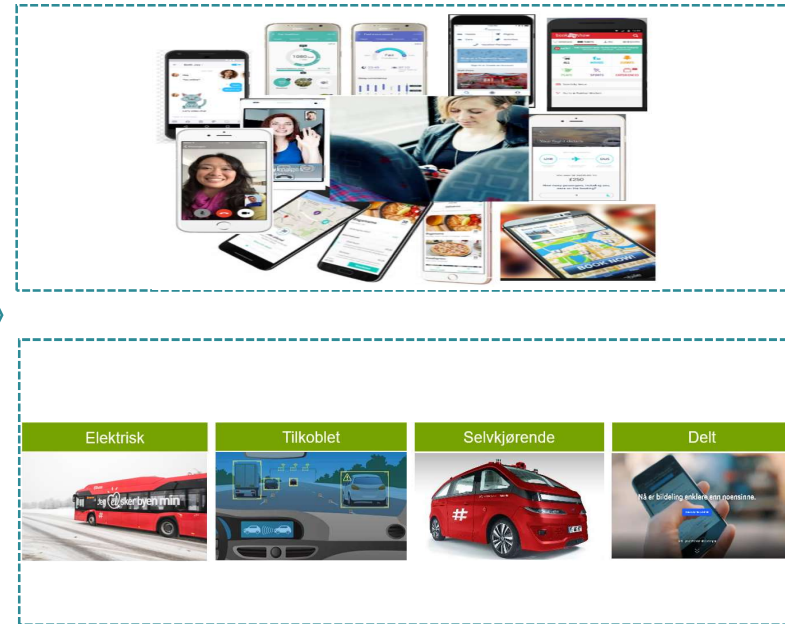

UNs Sustainable Development Goals

- Our selected goals with focus on mobility -

The future

- Significant changes in mobility – what kind of future are we creating and contributing to as a publicly own company

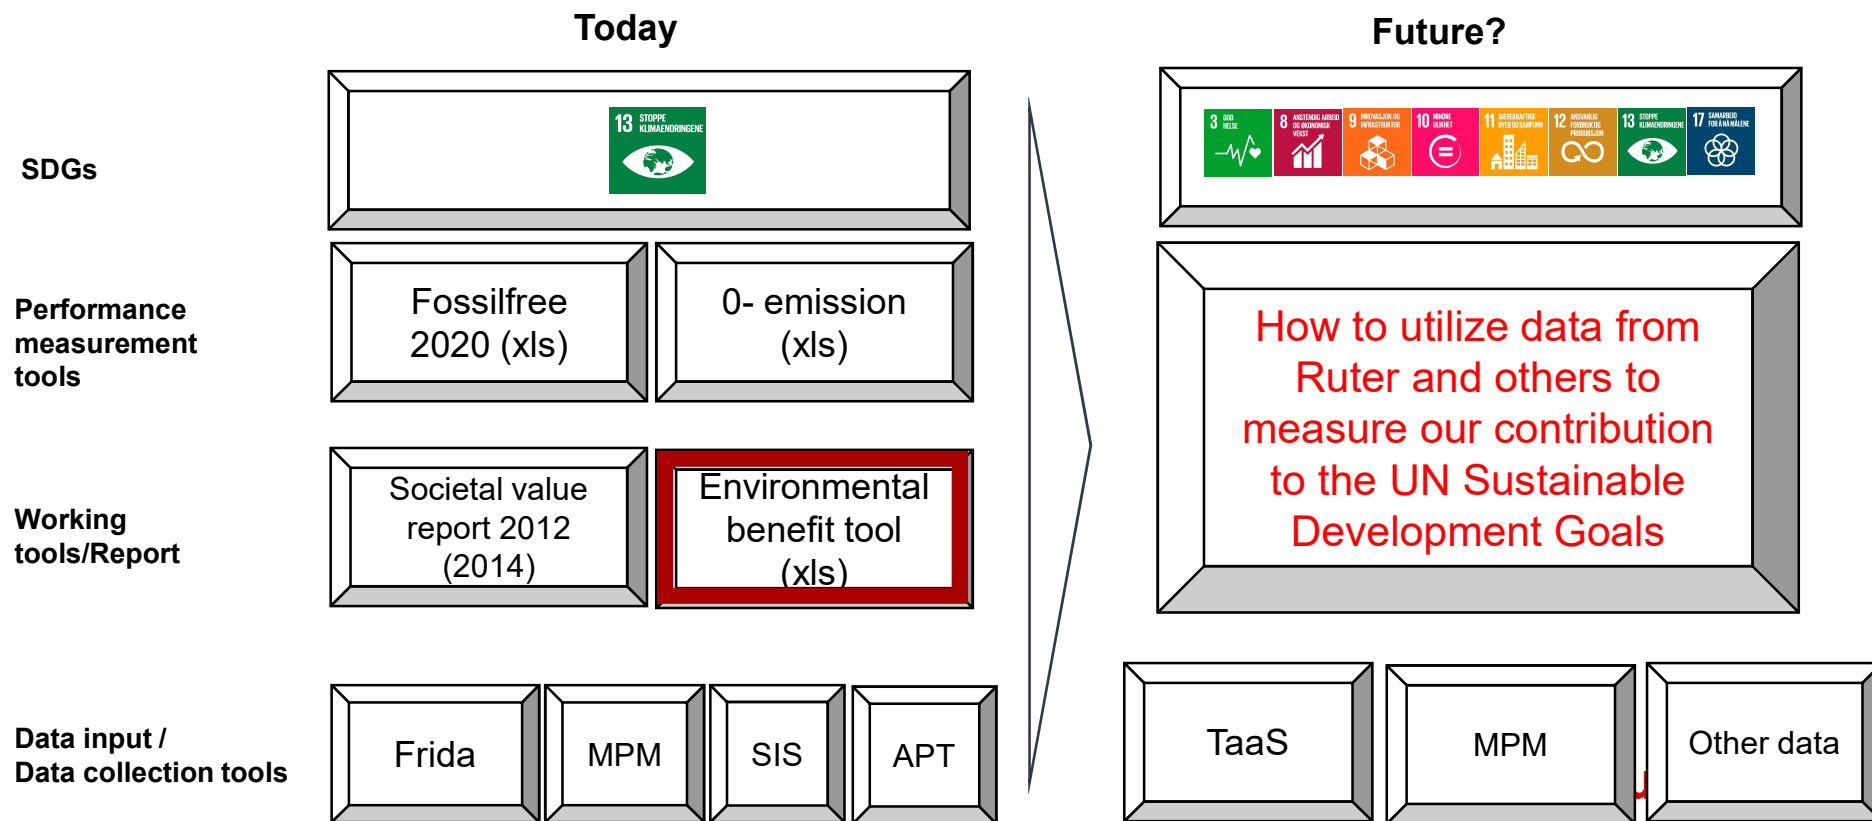

How to leverage to full potential of the sustainable development goals

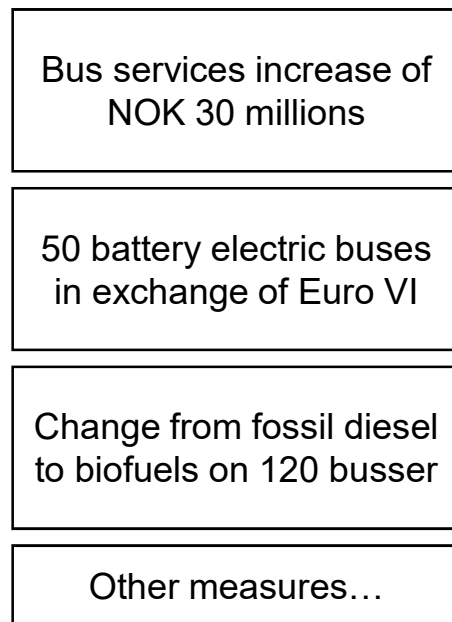

Strategy	●	●	●	●	●	●	●	●
KPIs					●		●	
Tools	● ●				● ●	● ●	● ●	
Competence	●	●	●	●	●	●	●	●

Can we develop a digital, simple and effective way to measure and steer towards sustainability?

Tools: «Environmental benefit calculator»

Input

Tool

«Calculator» to estimate benefit

- Easy to use
- Based on output from existing models

Output

Environmental benefit by measure and investment

- CO₂
- NO_x
- PM
- Other

Ruter#

Data we have (not exhaustive)

- From vehicles: driving times, distance, position (SIS)  ↗
- Automatic passenger counting (APT) 
- Fuel consumption (FRIDA)
- From route planner and ticketing applications
- Interaction with customers from CRM and SoMe 
- Surveys on travel habits (MIS) 
- Future: real time emissions from vehicles
- Future: person travel data from telecom

Ruter#

Examples of topics of interest

- Measure the public transport contribution to GHG reductions from
 - congestion relief
 - reduction in vehicle-km due to land-use densification associated with public transit systems
- Contribution to health and environment
 - More value for land-use by building public transport infrastructure instead of highways and thereby freeing space to green and social areas
 - reduction of noise
 - measure degree of air pollution in different areas and give alternative routes for biking and walking, key focus on high-pollution days

Ruter#

And what is it important to ask ourselves when coming up with suggestions?

Which value does it help us create associated to the 8 goals?

How does it help us reach our and the regions vision and goals?

Does it improve the travelling experience and how?

How may other stakeholders benefit from it?

Ruter#

Our key questions

How can we measure our contribution to the UN Sustainable Development Goals?

...based on Ruter data and/or other data?

... and how can this accelerate the journey towards offering sustainable freedom of movement?

Ruter#
